Project Description

Built in 1972, the 24,000 SF two-story building is served by two four-pipe multi-zone AHUs. Original air distribution duct is lined. Steam humidifiers in the duct are not operational. Building heating hot water, chilled water and domestic hot and cold water are served from the Talley Student Center mechanical room. A steam pressure reducing station (inactive) is installed in the second floor mechanical room. Existing controls are pneumatic.

This project will replace the aging building HVAC system, including air handling units, steam humidification, air distribution duct, VAV boxes with zone reheat and digital controls. Some ACM abatement is anticipated.
